

Tool harness

◆ *Features: ergonomically designed harness*

◆ *Benefits: reduced risk of accidents and back injuries*

The Skillers Flexi-System is a padded shoulder harness with a system of tool attachments designed to spread the weight of tools and equipment evenly, instead of transferring all of the weight to the wearer's hips and lower back, thereby reducing fatigue and the risk of accidents and back injuries.

The system allows tradespeople to customise their workwear to suit their particular needs with pouches and holders for a wide range of tools and equipment.

Components to the system include an ergonomically designed belt, padded shoulder harness and suspenders and several pouches that evenly spread the weight of tools and equipment on the wearer.

Accessories include a basic tool pouch, long tool pouch, large tool pouch, nail liner and mobile phone pouch.

Intrinsically safe communication systems

◆ *Features: adaptable to respiratory systems*

◆ *Benefits: enables safe communications in hazardous situations*

The Hardline CSI-1000 General Industry kit from Con-Space is an intrinsically safe communication system that provides continuous two-way communication in hazardous environments such as petrochemical facilities and various confined spaces.

The kit supports one operator and one user (entrant) with or without breathing apparatus and up to a distance of 15 m, providing continuous team communication.

It can be adapted to facemasks, breathing apparatus and chemical suits.

The kit is a one-on-one communication system configured specifically to help contractors work with greater efficiency and safety during operations in hazardous areas, especially where respirators or breathing equipment must be worn. The kit can be expanded for one additional user adding the additional entrant kit.

In confined space applications this allows one attendant to monitor two entrants in adjacent spaces at the same time, giving greater efficiency without reducing worker safety.
