

New Skillers workwear links function with comfort

A new range of construction clothing from Sweden is described as a flexible system of integrated workwear to meet the comfort, style and functional needs of today's skilled professional tradesman.

THE SKILLERS RANGE – which includes shorts, pants, tool carrying accessories and a tool vest is said to bring construction clothing into the 21st century and appeal to anybody looking for workwear that is high quality, comfortable, practical and with good looking European style.

Made from a hard wearing cotton/ polyester lightweight fabric that is very comfortable, Skillers shorts and workpants are designed with a host of unique features that are practical and designed for all-day comfort.

Features include special pockets that lock removable kneepads in place and Velcro tool

fasteners for Skillers holster pockets, pouches and hammer holders.

As well as its range of construction clothing, Skillers is Europe's leading manufacturer of products designed to literally take the strain off personally carrying tools and equipment on the job, all day long. Its 'flexi-system' is an innovative system of tool attachments and padded shoulder harness designed to spread the weight of tools and equipment evenly – unlike tool belts which transfer all the weight to the hips and lower-back, leading to fatigue, increased risk of accident and back injuries.

The flexi-system allows customisation of workwear to suit individual needs with pouches and holders for a wide range of tools and equipment.

The company's signature products include:

- basic lightweight pants with top loading kneepad pockets
- holster pocket work pants for tools with top-loading kneepad pockets for the company's lightweight, anatomical kneepads
- a 12 pocket tool vest which eliminates the stress and strain of traditional belts and harnesses and puts all tools within easy reach to accomplish the task at hand

Skillers workwear is designed for comfort and functionality, including innovative pockets and the 'flexi system' for carrying various tools and work items without stress or fatigue.

- the Flexi-System which enables customisation of workwear with a belt, shoulder harness, suspenders and pouches that evenly spreads the weight of tools and equipment □
